SUMMARY

Third-year Computer Science student at Kasetsart University seeking a Business Analyst internship. A developer who genuinely enjoys talking with people and is curious about what they need before writing any code. Led BA and UI/UX for the ICPC Thailand Regional registration system, and built a university search platform during an internship. Eager to learn and comfortable working across business and engineering teams.

WORK EXPERIENCE

Software Engineering Intern — Office of Computer Service *Aug 2026 – Dec 2026*
KU Phumpanya Project, Kasetsart University

- Built a full-stack semantic search platform end-to-end using Next.js, Laravel, and FastAPI, integrating GraphRAG retrieval across Qdrant and Elasticsearch
- Designed the retrieval architecture and API contracts connecting the embedding pipeline, search indices, and frontend, translating university search requirements into system design decisions

Research Assistant — CNC Research Laboratory *Jan 2025 – Present*
Kasetsart University

- Processed 990M+ Ookla/M-Lab NDT7 network-quality records with GeoPandas and BigQuery, building the ISP-to-ASN grouping and spatial join pipeline behind AINTEC '26's cross-country broadband/mobile quality analysis

Teaching Assistant — Statistical Programming, Kasetsart University *Nov 2025 – Apr 2026*

- Led tutoring and exam-prep sessions; graded assignments and proctored exams

SELECTED PROJECTS

ICPC Thailand Regional 2026 Registration System *Jul 2026 – Present*
Organizer, Business Analyst & UI/UX Lead

- Led the end-to-end product design of the registration platform, defining user flows, business requirements, and UI/UX for nationwide team registration
- Analyzed and consolidated registration workflows across sub-regional competitions into a unified platform, coordinating requirements between organizers and developers

AINTEC '26 Poster — Internet Landscape Study of Southeast Asian Countries *AINTEC 2026 (ACM SIGCOMM-sponsored), Taipei*

- Co-authored an empirical study evaluating broadband/mobile network quality across 9 Southeast Asian countries; contributed to data collection, cleaning, ISP-to-ASN grouping, spatial analysis, and large-scale analysis of 990M+ Ookla/M-Lab NDT7 records

Cake Your Story — S&P Bakery Campaign Microsite

- Built an interactive cake-builder campaign site matching choices to 20 personality archetypes, using React 18, deployed on Vercel

EDUCATION

B.S. Computer Science *Expected 2028*
Kasetsart University · GPA 3.1 / 4.0

High School
Bodindecha (Sing Singhaseni) School

LEADERSHIP & ACTIVITIES

President — Computer Science Student Club *Jun 2025 – Mar 2026*
Kasetsart University

- Led a 40-member student organization serving 500+ Computer Science majors; coordinated with faculty and external partners
- Organized 10+ academic and club events per year

Organizer, ICPC — Kasetsart University *Jun 2026 – Sep 2026*

- Organize competition logistics and maintain the registration system for ICPC Thailand Regional

Coordinator & Co-Moderator — Guest Lecture on Agile in Practice *Aug – Oct 2026*

- Ran sign-ups, the project proposal and room request for an external speaker; co-moderated the 3-hour live Q&A (9 Oct 2026)

Volunteer — APSys 2026 (ACM SIGOPS Asia-Pacific Workshop on Systems), Bangkok *Sep 2026*

Volunteer — FOSSASIA Summit, Bangkok *Mar 2026*

- Supported event logistics for an international open-source tech conference

ADDITIONAL INFORMATION

Languages: Thai (Native), English (Intermediate, B2)

Programming: Python, JavaScript/TypeScript, Java, C, C++, PHP, SQL

Frameworks: Next.js, React, FastAPI, Laravel

Data / Infra: Elasticsearch, Qdrant, PostgreSQL/MySQL, Git, Docker, BigQuery

Traits: Works well under pressure and in cross-functional teams

ACADEMIC PROJECTS

IT-Support by OCS KU — Omnichannel IT Helpdesk *CS471 Software Design, 2026*
Analytics & Reporting, Backend · Team project · Go (Fiber), PostgreSQL, GORM, MinIO, Next.js

- Built the analytics & reporting module (dashboard and agent-performance endpoints with period filtering) behind a Facade, applying the Dependency Inversion Principle so handlers depend on abstractions rather than data-access details
- Implemented MinIO-backed attachment storage and an atomic follow-up-with-files flow, with a database migration so a ticket reply and its files are saved together or not at all; wrote the API contract documentation and integration tests against a real MinIO instance
- Contributed to the Next.js front-end: file attachments in the helpdesk and follow-up views, route protection for authenticated pages, error-code handling, and WebSocket reconnect backoff
- Worked in a large team repository through pull requests and code review, and used SonarQube static analysis to measure and improve code quality before and after refactoring

Lockerithm — Locker Management Desktop App *CS211*
Staff-role system · Team of 3 · JavaFX 21, Maven, JSON, BCrypt

- Designed the staff UI in Figma and implemented it in FXML/controllers: locker and key management, service-request approval that writes results back to the data store, locker contents viewing, and a locker usage history page
- Modeled four key types (manual, cable lock, digital, padlock) through inheritance and polymorphism, and built JSON datasources and file structures for keys and lockers; added a forced password change on a new staff member's first login
- Created the mock data for service points, lockers and keys, fixed staff-side bugs across four milestone releases, shipped Windows and macOS builds, and wrote the staff user manual

Haris HR & Payroll Database *KU 221 Database, Mar 2026*
Team of 4 · MariaDB, phpMyAdmin

- Designed and implemented the core employee schema (person, employee, address, position, branch, shop, shop email config) for a shared payroll database; fixed column data types to match the project documentation
- Worked with three teammates who each owned a domain (payroll entries, file uploads, OT and penalty settings), keeping table keys consistent across modules; exchanged schema as versioned SQL dumps in Git

Crowd Density Analysis from CCTV (CSRNet) *CS364, 2025*
Team project · Python, PyTorch, OpenCV, Tkinter

- Trained and evaluated the CSRNet crowd-counting model on the ShanghaiTech Part B and a KU-collected dataset, producing the model weights used by the application
- Built the Python (Tkinter) front-end app showing live video feeds, density heatmaps and a congestion ranking, so non-technical users can read crowd levels at a glance
- Prepared the information slides and delivered the project presentation

Dental Clinic Management System *Systems Analysis & Design, 2026*
Requirements & UI design · Team project · Figma, HeroUI

- Replaced a clinic's legacy back-office program on paper: documented pain points from stakeholder interviews, wrote the SRS (43 functional requirements, prioritized Must/Should) and a TO-BE business process across patient, staff and dentist roles
- Designed 19 screens in Figma on the HeroUI kit with a token-based design system (colour, spacing, radius), using POS-style flows for registration and checkout so untrained staff can operate it
- Logged open requirement gaps (e.g. the real medical-certificate form) and applied teammate review fixes across the screens

Smart IoT Forest Fire Notification *CNC Research Laboratory, 2026*
Project Manager · IoT, Machine Learning (WEKA)

- Managed a forest-fire notification system with a machine-learning detection component; reviewed and interpreted model output and coordinated delivery to completion

SFTP-Lite — LAN File Transfer *CS351*
Python · Sockets

- Implemented a file-transfer protocol over TCP (STORE, GET, LIST, DELETE) with UDP broadcast beacons so clients discover servers on the local network without configuration
- Wrote the design document, slides and demo video
